

# Habitat is Where It's At!

*What is a living thing? What is a nonliving thing? Talk to your group members or classmate and list at least 3 living things and 3 nonliving things. How do both living and nonliving things help everything in a habitat to survive?*

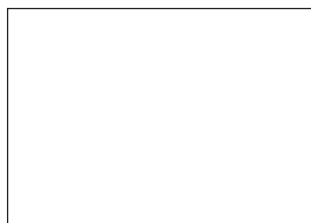

During your **nature walk at school**, list 10 living things and draw each living thing. If you find more than one of the same living thing, put a √ next to it each time you find another one. (Example:  √√√√ )
